DATA INPUTS

Objective Data

- RAW: cg_timestamp=2024-02-02 11:40:00
- RAW: glucose_mg_dL=185
- RAW: from_state=TIR_State
- RAW: to_state=TAR_State_Level1

Subjective Data

No records in current dataset for this step.

Inferred Data

No records in current dataset for this step.

Conversation Aquired Data

No records in current dataset for this step.

SENSING AND INFERENCE

Personicle Engine

Event Extraction

Detected event: glucose_state_transition
Event family: Glucose dynamics
Objective packets parsed: 4 (4 keyed signals)
Primary physiologic signal: 185 mg/dL (High)
Primary behavior signal: No activity sample in this packet
Time phase: Morning
Extractor output: Glucose state transition extracted
Signals detected: cg_timestamp, glucose_mg_dL,

Fri, Feb 2, 11:40 AM

Event: glucose_state_transition

Meal/Event ID: glucose-transition-1

Replay interval: 423 min from previous event

Personal Machine Learning Model

Standby

Predicts daily loneliness level at wake-up and runs daytime loneliness monitoring checks.

Personal Causal Analysis

Standby

On each meal log, estimates counterfactual glucose trajectory for alternative food/activity choices.

State Estimation Module

Risk level: Medium
Confidence: 1
Glycemic band: High
Trajectory: Unknown
Activity intensity: Unknown
Sleep recovery signal: Not present in this step
Key states: Previous State=TIR_State; Current State=TAR_State_Level1; Glycemic Zone=TAR; Glycemic

Current State

- Previous State: TIR_State
- Current State: TAR_State_Level1
- Glycemic Zone: TAR
- Glycemic Severity: Level1
- Glucose Mg/DL: 185

Decision Summary

- Confidence: 1
- Intervention Available: true
- Selected Agent: Diabetes Agent
- Selected Agents: Diabetes Agent,Wellness Agent
- Escalation Level: watch

Contextual Inference Engine

Context phase: Morning
Behavioral context: Glucose dynamics (Unknown)
Physiologic context: High
Meal load context: No meal carbs in this step
Intervention context: Actionable
Stream interval from previous event: 423 min
Expected follow-up window: Glucose touchpoint cycle: meal, transition, exercise, and rapid-change checks.

Knowledge Base

Knowledge mode: local diabetes guideline KB
Retrieval query tags: glucose_state, diabetes_general
References selected: 2
Top refs: - ADA-SOC-2026-REC-6.15: ADA 2026: Hypoglycemia Immediate Treatment | - ADA-SOC-2026-REC-6.3A: ADA 2026: A1C Goal for Many Nonpregnant Adults
KB output: Type II diabetes transition policy applied

CENTRAL PLANNING

Orchestration Layer

Priority: P1
Selected agent(s): Diabetes Agent + Wellness Agent
Routing rationale: Triggered by: state transition to TAR State Level1
Escalation level: watch
Triggered components: 8
Delivery surfaces: Chatbot | Dashboard | Caregiver portal
Orchestrator output: Multi Agent Orchestrator activated Diabetes Agent, Wellness Agent (state transition)

Guidance Generator

Guidance status: Generated
Objective grounding: Grounded on 185 mg/dL and unknown pattern
Primary recommendation: Consider hydration, a brief walk, and monitor your glucose trend.
Reasoning summary: Mild to moderate hyperglycemia | State transitions trigger targeted Type II diabetes guidance.
Generator output: Actionable transition guidance composed

SAFETY AND DELIVERY

Guardian Agent

Safety Gate: Passed with Caution

Safety verdict: Caution
Guardian note: Actionable guidance allowed with monitoring and follow-up reminder.
Escalation alignment: watch
Display gate: Passed with caution
Guardian output: Safety verdict: Caution. Actionable guidance allowed with monitoring and follow-up reminder.

Interfacing Layer

Chatbot | Dashboard | Caregiver portal

Active interface: chatbot
Surface payload type: Conversational guidance card
User card available: Yes
Delivery status: Intervention message prepared
Interface output: State-transition alert delivered

CHATBOT MESSAGE

Hi, I'm your PCU assistant working with Diabetes Agent, Wellness Agent. Glucose changed state from TIR_State to TAR_State_Level1 at 11:40. Consider hydration, a brief walk, and monitor your glucose trend. Safety Keeper approved this message with caution. I will check again around 11:55 AM.
